1	Introduction	2
2	Equations	4
3	Sections	5
3.1	Title of the subsection	5
A	Title for Appendix A	6

Section 1 Introduction

The level of English writing in a report must be appropriate. Attention should be paid to correct spelling, grammar, punctuation, sentence structure and clarity of style.

Normally, the word ‘I’ should not be used.

Here are some examples on how to cite papers and books. There are a journal paper [Ein05], followed by two journal papers [CN47, Kat87], and a book [Dir81].

The following shows how to use list.

- (a) Students should do individual projects.
- (b) The report must be typed using Latex. The main text should be at least 20 pages, and preferably not more than 50 pages, with font size 12 and 1.5 line spacing. Title page, table of contents and references are not counted.

The following shows nested lists.

1. The followings are examples of how to include tables.

- (i) Table 1

1	2	3	4
5	6	7	9
10	11	12	13

Table 1: A simple table v1

(ii) Table 2

1	2	3	4
5	6	7	9
10	11	12	13

Table 2: A simple table v2

2. The following is an example of figure.

Figure 1: A picture of Euler.

Section 2 Equations

Different templates for equations.

(a) Using “\$”.

$$x = x' \cos \theta - y' \sin \theta, \quad y = x' \sin \theta + y' \cos \theta.$$

(b) Using “align”.

$$\begin{aligned} x &= x' \cos \theta - y' \sin \theta, \\ y &= x' \sin \theta + y' \cos \theta. \end{aligned}$$

(c) Using “equation”. You can use alignment tab by adding “split” environment.

$$\begin{aligned} x &= x' \cos \theta - y' \sin \theta, \\ y &= x' \sin \theta + y' \cos \theta. \end{aligned} \tag{2.1}$$

The equation (2.1) is standard.

(d) Using “gather”. Each line will automatically centered. You can use alignment tab by adding “split” environment.

$$\begin{aligned} x &= x' \cos \theta - y' \sin \theta, \\ y &= x' \sin \theta + y' \cos \theta. \\ x &= x' \cos \theta - y' \sin \theta, \\ y &= x' \sin \theta + y' \cos \theta. \end{aligned}$$

Section 3 Sections

If a section contains more than one topic, you need to organize them into subsections.

3.1 Title of the subsection

Definition 3.1. Statement of the definition.

Theorem 3.2. [Theorem in Logic]

The followings are equivalent.

(a) p implies q .

(b) not q implies not p .

Lemma 3.3. Statement of the lemma.

Corollary 3.4. Statement of the corollary.

Proof. Proof of the collary.

This follows from the equation

$$E = mc^2. \tag{3.1}$$

□

Proof of Theorem 3.2. Proof of Theorem 3.2.

This can be proved by consider the following cases.

□

Remark 3.5. You need to give explanations to your steps. Use formal language. Do not include symbols like $\Rightarrow$ in your writings.

Section A Title for Appendix A

This is Appendix A.
